For this revision of their bestselling junior- and senior-level text, Guru and Hiziroglu have incorporated eleven years of cutting-edge developments in the field since *Electric Machinery and Transformers* was first published. Completely re-written, the new Second Edition also incorporates suggestions from students and instructors who have used the First Edition, making it the best text available for junior- and senior-level courses in electric machines. The new edition features a wealth of new and improved problems and examples, designed to complement the authors' overall goal of encouraging intuitive reasoning rather than rote memorization of material. Chapter 3, which presents the conversion of energy, now includes: analysis of magnetically coupled coils, induced emf in a coil rotating in a uniform magnetic field, induced emf in a coil rotating in a time-varying magnetic field, and the concept of the revolving field. All problems and examples have been rigorously tested using Mathcad.

Australia has the highest number of Nobel Prizes winners in the world per capita. This beautifully

presented work celebrates these great Australian heroes and their inspiring achievements. Collected for the first time with colourful life portraits, the work of these outstanding individuals is celebrated to inspire all readers.

Introduction: where do conventions come from? -- Some implications of D'Andrade's assumptions -- Poetic conventions as fossilized cognitive devices: the case of medieval and Renaissance poetics -- Frozen formulae and expressive force: the ballad "Edward"--Artistic devices and mystical qualities in Hebrew devotional poems -- Artistic devices and mystical qualities in Hebrew devotional poems -- The translated poem as an esthetic object how conventions constrain one another in a poem -- The translated poem as an esthetic object how conventions constrain one another in a poem -- Some remarks on the nature of trochees and iambs and their relationship to other meters

Jarvis Langton is an unborn-again Christian living on the fringe. He's not big on life and has tried to finish his own twice. Still, most mornings, he quite likes to sun himself at Sydney's Royal Botanic Gardens. One morning he notices something winking at him from a nearby bush. When he investigates he finds the dead body of his friend, Lady; a Thai transvestite. Jarvis is not someone with his thoughts lined up in any reasonable order. It takes him a while to work out Lady must have been murdered. It takes him longer to decide he's going to find her killer - but once he does, the premonition that finding Lady's murderer will bring him his own end, happens in an instant. "Parable of the Forgotten is a first class, no rest-stop, brilliant, whirly gig!" Dr She Mackenzie Hawke, University Of Sydney.

NIST SP 1800-16 a & b DRAFT released 29 November 2018 Transport Layer Security (TLS) is the security protocol used to authenticate and protect internet and internal network communications for a broad number of other protocols--including Hypertext Transfer Protocol (http) for web servers; Lightweight Directory Access Protocol (LDAP) for directory servers; and Simple Mail Transfer Protocol, Post Office Protocol, and Internet Message Access Protocol for email. Organizations risk losing revenue, customers, and reputation, and exposing internal or customer data to attackers if they do not properly manage TLS server certificates. TLS is the most widely used security protocol to secure web transactions and other communications on the internet and internal networks. TLS server certificates are central to the security and operation of internet-facing and internal web services. Improper TLS server certificate management results in significant outages to web applications and services--such as government services, online banking, flight operations, and mission-critical services within an organization--and the risk of security breaches. Why buy a book you can download for free? We print this book so you don't have to. First you gotta find a good clean (legible) copy and make sure it's the latest version (not always easy). Some documents found on the web are missing some pages or the image quality is so poor, they are difficult to read. We look over each document carefully and replace poor quality images by going back to the original source document. We proof each document to make sure it's all there - including all changes. If you find a good copy, you could print it using a network printer you share with 100 other people (typically its either out of paper or toner). If it's just a 10-page document, no problem, but if it's 250-pages, you will need to punch 3 holes in all those pages and put it in a 3-ring binder. Takes at least an hour. It's much more cost-effective to just order the latest version from Amazon.com This book includes original commentary which is copyright material. Note that government documents are in the public domain. We print these large documents as a service so you don't have to. The books are compact, tightly-bound, full-size (8 1/2 by 11 inches), with large text and glossy covers. 4th Watch Publishing Co. is a HUBZONE SDVOSB. <https://usgovpub.com>

Deep learning practices have indicated great execution over a wide scope of fields, including natural language processing, computer vision, speech and audio processing, and robotics. These designs depend on deep neural networks, the parameterized models which utilize different layers of depiction to change information into an explicit interpretation. By utilizing unsupervised learning or self-learning paradigms,

deep learning techniques can modify these systems with helpful highlights, staying away from the over-fitting issues ordinarily observed when neural networks are trained. This book enlightens the valued principles of deep learning to settle as an incredible choice for robotic applications.

Profiles the dramatic art hoax through which a small-time Dutch painter conned a reviled Nazi leader by creating works that impersonated those of famed artist Jan Vermeer, a seven-year deception during which the forger hid his mediocre artistic abilities through psychologically manipulative practices. 30,000 first printing.
