Multicore microprocessors are now at the heart of nearly all desktop and laptop computers. While these chips offer exciting opportunities for the creation of newer and faster applications, they also challenge students and educators. How can the new generation of computer scientists growing up with multicore chips learn to program applications that exploit this latent processing power? This unique book is an attempt to introduce concurrent programming to first-year computer science students, much earlier than most competing products. This book assumes no programming background but offers a broad coverage of Java. It includes over 150 numbered and numerous inline examples as well as more than 300 exercises categorized as "conceptual," "programming," and "experiments." The problem-oriented approach presents a problem, explains supporting concepts, outlines necessary syntax, and finally provides its solution. All programs in the book are available for download and experimentation. A substantial index of at least 5000 entries makes it easy for readers to locate relevant information. In a fast-changing field, this book is continually updated and refined. The 2014 version is the seventh "draft edition" of this volume, and features numerous revisions based on student feedback. A list of errata for this version can be found on the Purdue University Department of Computer Science website.

Vice Admiral Stockdale was on active duty in the navy for thirty-seven years. As a fighter pilot operating from an aircraft carrier, he was shot down over North Vietnam in 1965. As the senior naval officer among the prisoners of war in Hanoi for seven and a half years, he was tortured fifteen times, put in leg irons for two years, and confined in solitary for four years. This experience was the crucible for his philosophical thought on issues of character, leadership, integrity, personal and public virtue, and ethics. Much of his philosophy is drawn from the Stoic philosophers, especially Epictetus, whom he had read before his capture. The selections in this volume converge around the central theme of how man can rise with dignity to prevail in the face of adversity - lessons just as valid for the challenges of present-day life as they were for the author's Vietnam experience.

Direct perception and experience led our ancestors to discover that the success of many daily activities was subject to the natural rhythms, phases, and positions of the moon. Learn how to use the timeless power of lunar cycles to strengthen yourself physically, mentally, and emotionally.
