Fatigue of structures and materials covers a wide scope of different topics. The purpose of the present book is to explain these topics, to indicate how they can be analyzed, and how this can contribute to the designing of fatigue resistant structures and to prevent structural fatigue problems in service. Chapter 1 gives a general survey of

the topic with brief comments on the significance of the aspects involved. This serves as a kind of a program for the following chapters. The central issues in this book are predictions of fatigue properties and designing against fatigue. These objectives cannot be realized without a physical and mechanical understanding of all relevant conditions. In Chapter 2 the book starts with basic concepts of what happens in the material of a structure under cyclic loads. It illustrates the large number of variables which can affect fatigue properties and it provides the essential background

knowledge for subsequent chapters. Different subjects are presented in the following main parts:

- Basic chapters on fatigue properties and predictions (Chapters 2-8)
- Load spectra and fatigue under variable-amplitude loading (Chapters 9-11)
- Fatigue tests and scatter (Chapters 12 and 13)
- Special fatigue conditions (Chapters 14-17)
- Fatigue of joints and structures (Chapters 18-20)
- Fiber-metal laminates (Chapter 21)

Each chapter presents a discussion of a specific subject.

2012 IACP Award Winner in the Food Matters category Supermarket produce sections bulging with a year-round supply of perfectly round, bright red-orange tomatoes have become all but a national birthright. But in Tomatoland, which is based on his James Beard Award-winning article, "The Price of Tomatoes,"

investigative food journalist Barry Estabrook reveals the huge human and environmental cost of the \$5 billion fresh tomato industry. Fields are sprayed with more than one hundred different herbicides and pesticides. Tomatoes are picked hard and green and artificially gassed until their skins acquire a marketable hue. Modern plant breeding has tripled yields, but has also produced fruits with dramatically reduced amounts of calcium, vitamin A, and vitamin C, and tomatoes that have fourteen times more sodium than the tomatoes our parents enjoyed. The relentless drive for low costs has fostered a thriving

modern-day slave trade in the United States. How have we come to this point? Estabrook traces the supermarket tomato from its birthplace in the deserts of Peru to the impoverished town of Immokalee, Florida, a.k.a. the tomato capital of the United States. He visits the laboratories of seedsmen trying to develop varieties that can withstand the rigors of agribusiness and still taste like a garden tomato, and then moves on to commercial growers who operate on tens of thousands of acres, and eventually to a hillside field in Pennsylvania, where he meets an obsessed farmer who produces

delectable tomatoes for the nation's top restaurants. Throughout Tomatoland, Estabrook presents a who's who cast of characters in the tomato industry: the avuncular octogenarian whose conglomerate grows one out of every eight tomatoes eaten in the United States; the ex-Marine who heads the group that dictates the size, color, and shape of every tomato shipped out of Florida; the U.S. attorney who has doggedly prosecuted human traffickers for the past decade; and the Guatemalan peasant who came north to earn money for his parents' medical bills and found himself enslaved for two years.

Tomatoland reads like a suspenseful whodunit as well as an expose of today's agribusiness systems and the price we pay as a society when we take taste and thought out of our food purchases.

The Greedy Hand is an illuminating examination of the culture of tax and a persuasive call for reform, written by one of the nation's leading policy makers, Amity Shlaes of The Wall Street Journal. The father of the modern American state was an obscure Macy's department store executive named Beardsley Ruml. During World War II, he

devised the plan for withholding taxes from your paycheck, thereby laying in place a system that allows the hand of government to reach into your wallet and take what it wants. Today, taxes make up more than a third of our economy, the highest level in history outside war. We live in the nation revolutionary father Thomas Paine foresaw when he wrote of "the Greedy Hand of government thrusting itself into every corner of industry." This book is a cultural examination of the way taxes influence our behavior, how they force us into an arbitrary system that punishes families and individual

enterprise. Amity Shlaes unveils the hidden perversities of our lifelong tax experience: how family tax breaks do little to help the family, and can even hurt it. She demonstrates how married women pay a special women's tax rate, higher than anybody else's. She shows how problems that engage and enrage us--Social Security problems, or the things we don't like about schools--are, at heart, tax problems. And she explains why the solutions Washington offers merely accelerate a vicious cycle. Finally, Amity Shlaes shows us a way out of this madness, endorsing a number of common-sense reforms that will give

all Americans a fairer and simpler tax system. Written with eloquent compassion for working Americans and their families, *The Greedy Hand* makes the best case yet for rethinking our tax code. It is a book no tax-paying citizen can afford to ignore.

The epic story also told in the film *FORD V. FERRARI*: By the early 1960s, the Ford Motor Company, built to bring automobile transportation to the masses, was falling behind. Young Henry Ford II, who had taken the reins of his grandfather's company with little business experience to speak of, knew

he had to do something to shake things up. Baby boomers were taking to the road in droves, looking for speed not safety, style not comfort. Meanwhile, Enzo Ferrari, whose cars epitomized style, lorded it over the European racing scene. He crafted beautiful sports cars, "science fiction on wheels," but was also called "the Assassin" because so many drivers perished while racing them. Go Like Hell tells the remarkable story of how Henry Ford II, with the help of a young visionary named Lee Iacocca and a former racing champion turned engineer, Carroll Shelby, concocted a scheme to reinvent the

Ford company. They would enter the high-stakes world of European car racing, where an adventurous few threw safety and sanity to the wind. They would design, build, and race a car that could beat Ferrari at his own game at the most prestigious and brutal race in the world, something no American car had ever done. Go Like Hell transports readers to a risk-filled, glorious time in this brilliant portrait of a rivalry between two industrialists, the cars they built, and the "pilots" who would drive them to victory, or doom.
