Enzymes

A model of enzyme functioning based on the idea that an enzyme is rigid and permanently shaped to be substrate-specific like a key fits a lock. In this analogy, the lock is the enzyme and the key is the substrate. Only the correctly sized key (substrate) fits into the key hole (active site) of the lock (enzyme)

Study guide - Chapter 6 - Metabolism - Energy and Enzymes One defining characteristic of living things such as cells is that they organize their environments, and as you know, organizing anything requires expenditure of energy! Where do cells obtain this energy, and how do they use it? Here we begin to explore concepts in energy, metabolism, and how cells regulate both - in short, how ...

We can study enzymes in the context of activation energy. Many biochemical reactions need a little input of energy to jump-start a thermodynamically favorable reaction. The activation energy is the amount of energy needed for the reaction to go forward and get over its activation barrier.
